Top 30 Average: 57.59

Plot Average: 54.30

Comments: Top 30 for YIELD of 72 tested; average of (3) replications.

The cool, wet weather through June slowed early growth, and sickly plants until July 1st. Warmer temps and more rain through mid-July caused rapid growth and very tall plants. High humidity of late July was replaced by dry weather until harvest. This site received one more rain in August than many places in MN. Killing frost on Sept. 15th.
